

# SC SERIES MACHINE VISION SYSTEM SMART CAMERAS

---

All in One

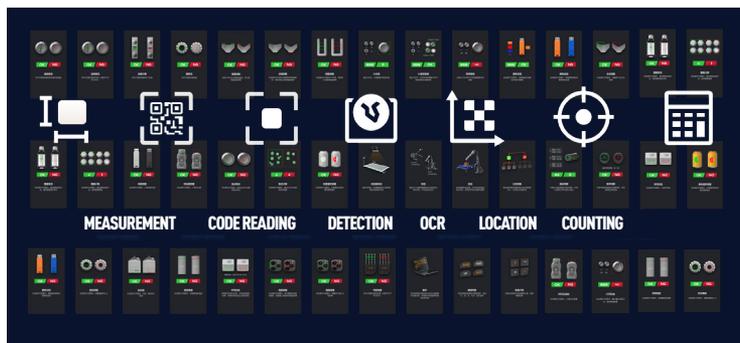

# Introduction

Machine vision is widely used in food and beverage, cosmetics, pharmaceutical, building materials and chemical/metal processing, electronic manufacturing, packaging, automobile manufacturing and other industries. Currently, it is mainly based on PC solution, and supplemented by embedded vision solution (intelligent camera, X86 open platform). For automated factories, solutions featured with simple operation and convenient maintenance of equipment have become the mainstream trend.

Smart camera is a highly integrated micro machine vision system, which integrates image acquisition, storage, processing and communication functions into one, thus forming a multifunctional, modular, high reliability, easy to operate machine vision solution. At the same time, due to the continuous iteration and update of DSP and FPGA technologies, its intelligence degree is also continuously improved, which can meet the needs of more and more complex machine vision applications.

## Performance

Rich algorithms, 30+ vision tools

Automatically set brightness, focus and white balance

Vision Tools

## ■ Comprehensive Error-proofing Detection Algorithm

Inspection solutions such as presence/absence, U/D, Positioning, counting, etc. are often used for error-proof inspection. More visual inspection tools can provide the optimal solution for parts of different shapes on the production line, making visual application easier.

## ■ Multiple Accessories Available for Better Imaging

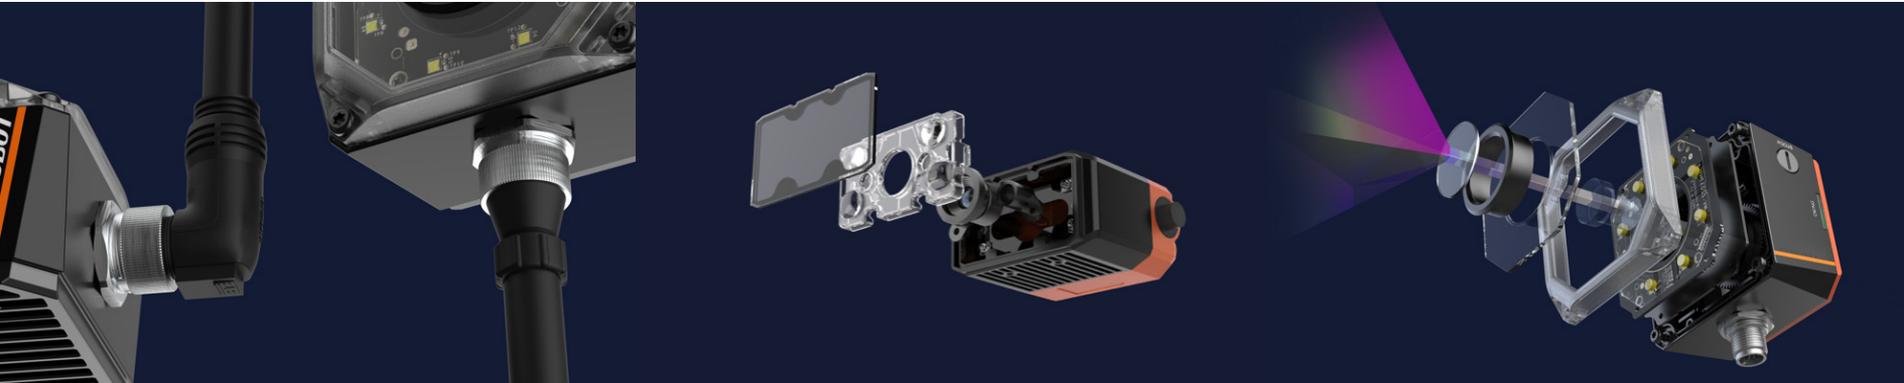

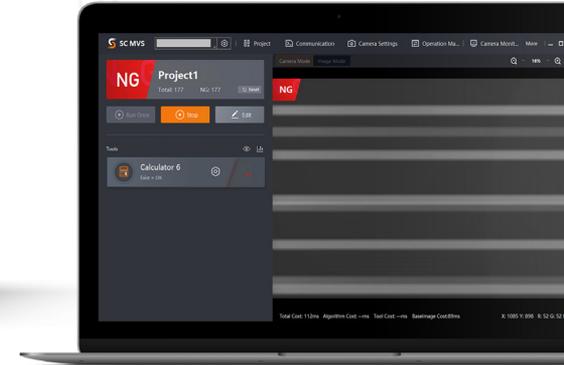

Red, blue, white and infrared light sources provide better imaging for products of different colors.

Visible light polarization mirror to filter glare interference.

Vertical and coaxial wiring supported, to adapt to more field applications.

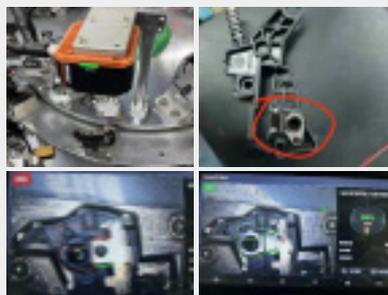

## ■ Easy-to-use Software

The SCMVS software equipped for SC series cameras debugging shares a well-designed interface and useful vision tools, requiring less professionalism for engineers. It can also quickly filter suitable tools in the visualized display interface, and help to deploy real-time applications on site.

# APPLICATION CASES

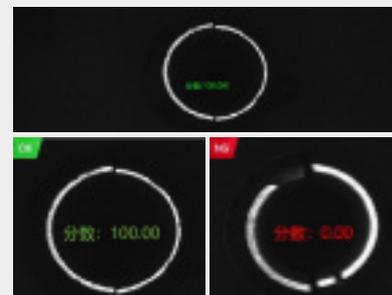

## Automobile industry

Error prevention testing of parts

Weld inspection

Workpiece appearance defect detection

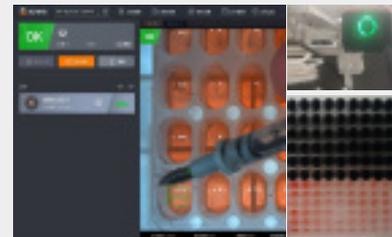

## Medical industry

Test tube code reading/size measurement

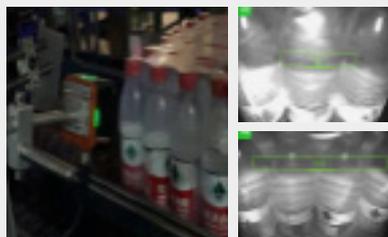

Detection of Covid-19 reagent results

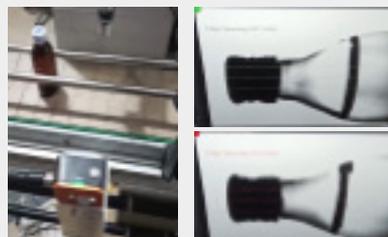

Test tube color recognition

## Packaging industry

Plastic packaging OCR

Liquid level detection

Pill box date character recognition

# SC3000 Vision Sensors

Adopts built-in location and measurement algorithms to detect object's existence, location, dimension, etc.

Model	Sensor size	Pixel size	Resolution	Max. frame rate	Mono/Color	Interface	Power consumption	Power supply	Lens Mount	EFL	Lens cap	Light source
SC3016M	1/2.9"	3.45 μm	1408 × 1024	60 fps	Mono	Fast Ethernet	48 W@24 VDC	24 VDC	M12-Mount	6/12/15 mm	Transparent; Half/ full polarization is optional	White/Red/Blue
SC3016C	1/2.9"	3.45 μm	1408 × 1024	60 fps	Color	Fast Ethernet	48 W@24 VDC	24 VDC	M12-Mount	6/12/15 mm	Transparent; Half/ full polarization is optional	White/Red/Blue
SC3050M	1/1.7"	3.2 μm	2368 × 1670	30 fps	Mono	Fast Ethernet	48 W@24 VDC	24 VDC	M12-Mount	8/12/16 mm	Transparent; Half/ full polarization is optional	White/Red/Blue

## Available Vision Tools

### Existence

Pattern existence/Spot existence/Edge existence/Circle existence/Line existence

### Recognition

OCR/Barcode recognition/Color comparison (For color model only)

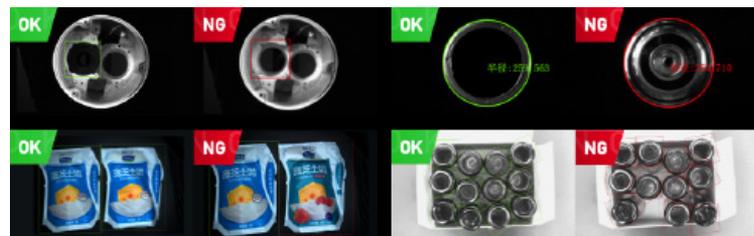

### Count

Pattern count/Spot count/Edge count

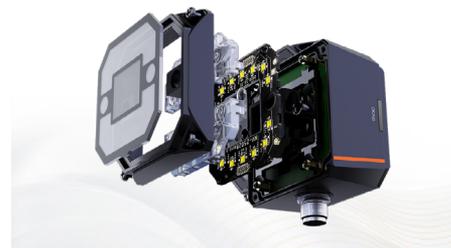

### Measurement

Brightness analysis/Contrast measurement/Greyscale size/Diameter measurement/Width measurement/Line angle/Line to line angle/Point to line measurement

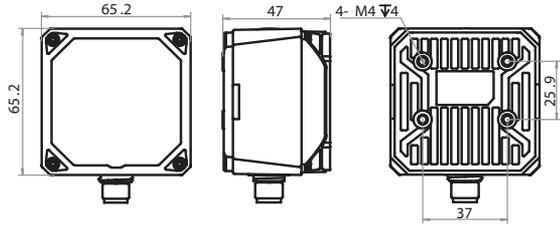

Integrated 30+ error-proof detection algorithms and AI recognition algorithms. With easy-to-use SCMVS, it can cover most equipment production quality inspection and other applications.

It can provide the best imaging effect with changable lens, light source, protective cover and other components.

## Available Vision Tools

### Existence

Pattern existence, spot existence, edge existence, circle existence, line existence

### Count

Pattern count, spot count, edge count

### Defect detection

Exception detection

### Recognition

OCR, code recognition  
For color model only: Color recognition, color contrast

### Location

Match location, match calibration

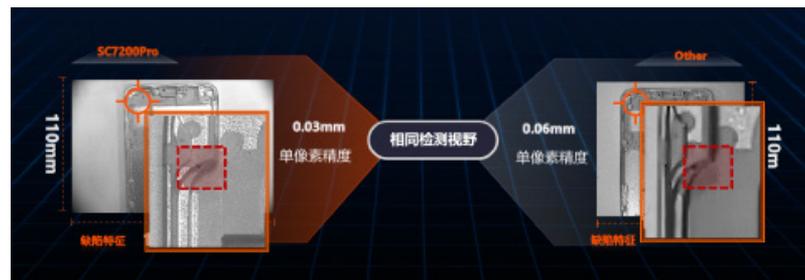

### Measurement

L2L angle, diameter measurement, brightness analysis, contrast measurement, width measurement, P2L measurement, greyscale size, line angle, edge width measurement

### Logic tool

If module, condition judge, logic judge, combination judge, character comparison, calculator

The resolution covers 1.6MP to 20MP, achieving ultra-high precision and ultra-large visual field coverage, providing high-quality images for machine vision applications.

# SC6000 Vision Sensors

SC6000 series smart camera is developed based on high-performance embedded processor, powerful hardware performance and fully functional VisionMaster algorithm software, which can meet the requirements of visual positioning, size measurement, defect detection, information recognition and other machine vision applications. Highly integrated product form brings more choices for intelligent manufacturing.

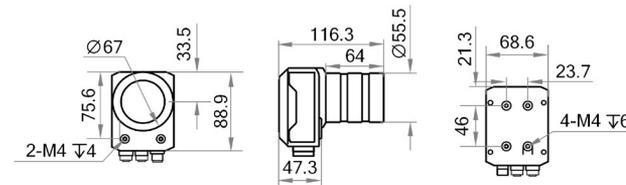

With built-in more than 140 visual tools, a variety of deep learning algorithms and graphic interaction, it can greatly improve the flexibility of smart camera, while maintaining its high usability. It is suitable for all kinds of complex visual detection applications.

While maintaining a high degree of hardware integration, it supports different combination of C-Mount lens, light source, and display, improving the application flexibility of smart camera and the ability to cope with complex scenes.

# SCMVS Client Software for SC series Cameras

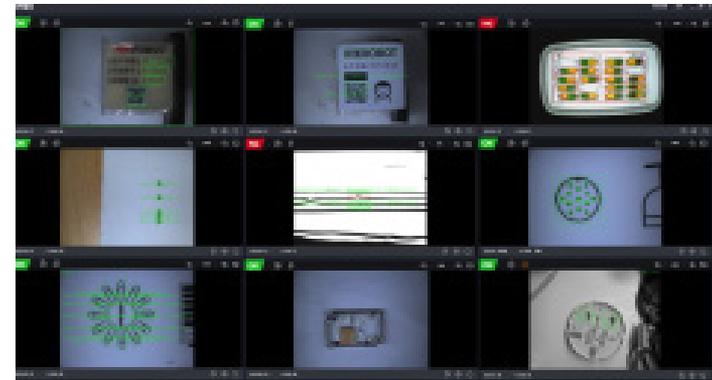

SCMVS client is an application software which is specially designed for SC series smart cameras. It supports vision detection of images acquired by the device in real time or imported into the device. Users can edit, manage and save the projects on the camera. It can meet the requirements of various machine vision applications such as positioning, measurement, recognition and deep learning applications.

## Features

- Supports multi-platform operation and is compatible with Windows7/10 32/64 bit operating system
- Simple interaction, guided process configuration mode, only four steps to build a vision project
- Support interface data statistics and multi-camera operation monitoring
- Supports I/O, communication, time calibration, firmware upgrade, password and other settings
- Supports one-click setting of camera parameters and automatically adjusts brightness, focus and white balance

Data statistics interface

Operation monitoring interface

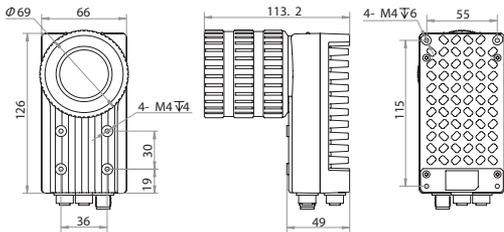

# X86 Open Platform

With a built-in high-performance X86 structural chip and pre-installed Windows system, X86 Open Platform is compatible with applications based on Windows system and supports user-defined visual detection processes and software.

Featured with high speed recognition efficiency, it has stable recognition ability for label paper and DPM bar codes of different materials, and efficiently and stably read difficult codes such as information loss, low contrast, distortion and etc..

With abundant choices of light sources, lenses and other modules, it can ensure the optimal image lighting effect and adapt to different working distance and field of vision requirements

12/20MP, without light source, C-Mount

Covers 3.0-12MP resolution, cameras achieve super high code-reading accuracy and large field of view. A single device can replace the use of multiple code readers at one time, which makes complex systems easier.

The Smart Code Reading Camera adopts embedded multi-core algorithm. The reconstructed data stream is processed in parallel among the underlying CPU, FPGA, and DSP chips; multi-threading of shooting, positioning and decoding is realized, and the efficiency of collective auditing learning technology is improved by 3 times

# ID6000 Series Code Readers For Logistics

Image-based high-resolution barcode reader ID6000 is specialized for the logistics industry. ID6000 has especially developed in algorithm development to cope with various complex logistics code reading application scenarios.

Based on high-performance multi-core deep learning processor, ID6000 series has specially optimized decoding algorithm and high decoding frames rate. It can identify complex codes in common environment such as stained, defective and poorly printing codes.

ID6000 series can be matched with various types of external integrated light sources, combined with high-performance decoding algorithms, to achieve a super-large depth of field effect of over 700mm, can cover packages under 700mm through 1 camera.

# IDH Series Handheld Smart Code Readers

As a powerful handheld barcode scanner, the IDH series adopt a million-resolution global exposure sensor. With high-level protection, IDH has red/white fill light which can be automatically adjusted. Support USB/network port, simple and convenient to use.

Self-developed algorithm and excellent DPM code reading, IDH series has excellent reading performance for difficult codes: bump codes, plugged codes, low contrast, scratches, reflections, and curved codes. Can realize efficient code reading in complex scenarios:

Network models support most common industrial communication protocols, such as Profinet and modbus, and etc..
